Beavercreek Township Government Identity Statement

Our Mission:

Beavercreek Township is an attractive destination that invites both residential and commercial development as a means for growing our economic base and providing residents a safe community in which to live and thrive. The Township works to maintain the image of a classic “bedroom community”, where residents feel the comforts of home. We do so by continuing to offer responsive and effective public and safety services with a focus on strategic economic development that respects the ideals of our residents.

Our Vision:

The Government of Beavercreek Township:

- Ensures the safety of Township residents and protect the investments of developers by maintaining an effective firefighting force, consistently enforcing building and safety codes, and maintaining a safe and accessible network of roads.
- Entice a mix of residential and commercial development to our community that supports the “bedroom community” identity of Beavercreek Township. We do so by continuing to quickly respond to permit requests and enhancing the traffic flow throughout the Township.
- Seek out and maintain partnerships with other local governments such as the City of Beavercreek, Greene County, the City of Fairborn, and the Beavercreek Township Parks District. Partnerships are valuable tools for enhancing municipal service quality and eliminating duplicate service delivery, which translates to savings for taxpayers.

Who We Serve:

The Government of Beavercreek Township, at the direction of our elected Trustees, serves all residents within the established boundaries of Beavercreek Township by providing public and safety services. We also serve commercial and residential developers by providing resources and services that support economic development.

What We Do & How We Do It:

Beavercreek Township and its partner agencies provide a full range of public and safety services that support the safety, comfort, and economic stability of our community. The following programs are undergoing focused planning and evaluation to meet the needs of our community as we respond to continuing growth:

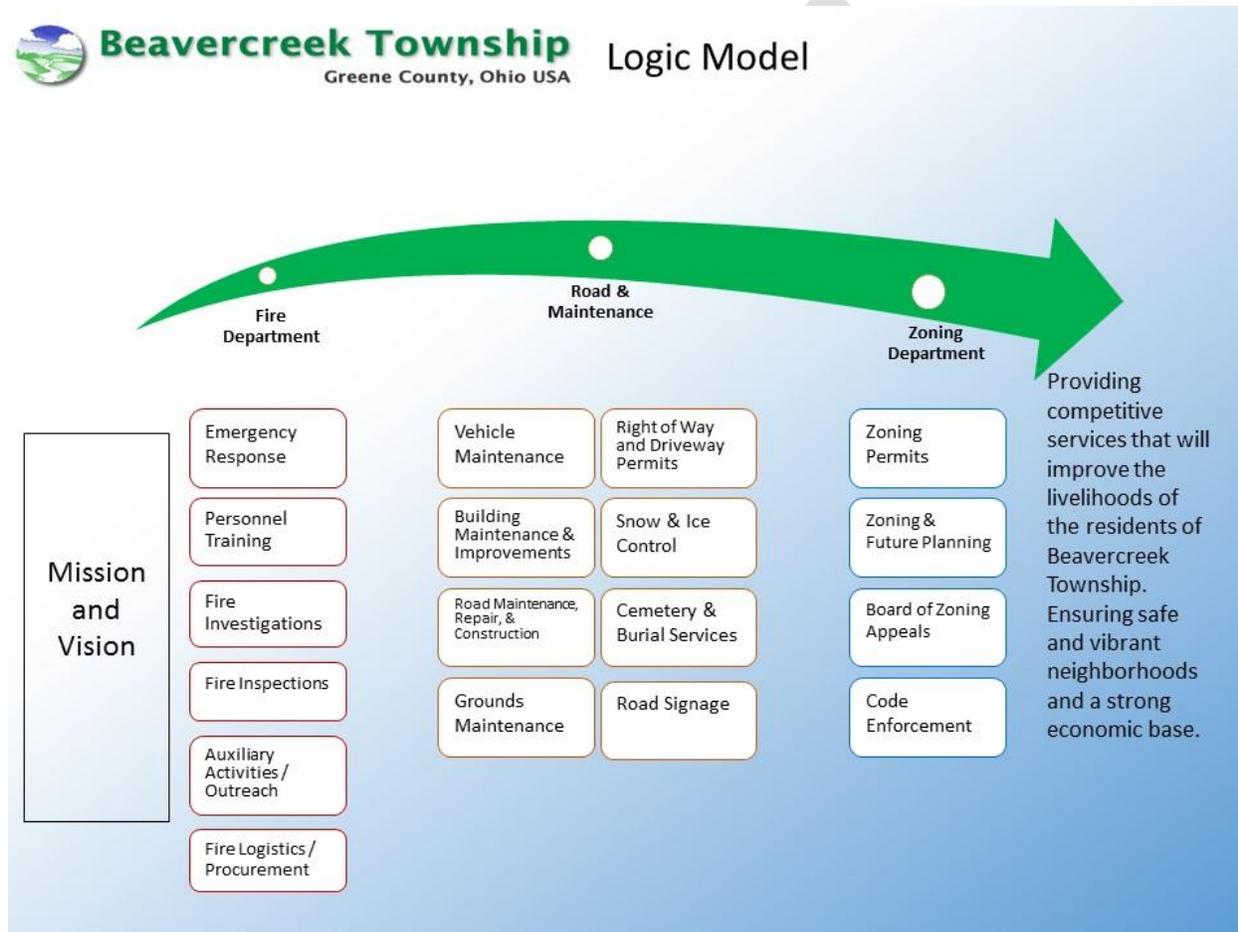

Figure 1: Logic Model

Our Competitive Advantages:

Beavercreek Township enjoys unique characteristics and circumstances which elevate our community in the crowded field of potential development destinations.

- Beavercreek Township residents enjoy paying no income taxes levied by the Township. This sets our community apart from local competitors for economic development such as the Cities of Xenia and Fairborn. Even though the City of Beavercreek currently levies no income tax, an environmental scan suggests that one may soon be levied to support existing municipal operations.
- The unincorporated area of Beavercreek Township has a significant reserve of undeveloped land available for commercial and residential development. This is attractive to developers because it offers them the flexibility to design facilities that meet their needs. New development benefits Township residents by increasing the economic base of our community, which allows the Township to provide a wide range of quality public and safety services.
- The Government of Beavercreek Township enjoys an excellent reputation among residents for quick and effective public and safety service delivery. This is beneficial to our residents because they enjoy a safer and more comfortable community that reflects traditional “bedroom community” ideals. This is attractive to potential developers who factor municipal service delivery into their decisions about which communities are desirable locations for new homes and businesses.

Motion

“I Make a motion to approve the Beaver Creek Township Government Identity Statement as presented.”

DRAFT

Motion

“I make a motion to extend the current Greene County Law Enforcement & Patrol Services Agreement approved 12-21-2015 for six (6) months and authorize the Township Administrator to sign for the Board.”

What ***BEET x HEET***[®] is NOT

The Importance of Sugar

BEET HEET® Concentrate contains significantly more sugar than any organic/chloride deicer in North America. When it comes to enhancing the deicing and anti-icing performance of rock salt and sodium chloride brine, the benefits of adding sugar are far reaching and significantly more important than many snowfighters realize. Here are several performance enhancing benefits that the sugars in BEET HEET® (BH) provide when BH is added to rock salt and brine at meaningful levels.

1. The sugars in BH suppress the freeze point of rock salt and brine.
2. The sugars in BH lower the effective working temperature of rock salt and brine.
3. The sugars in BH increase the ice melt capacity of rock salt and brine.
4. The sugars in BH significantly reduce the corrosion value of rock salt and brine.
5. The sugars in BH act as cryoprotectants. Cryoprotectants significantly slow down the rate at which water freezes. All deicers eventually dilute out by the snow and ice they melted leading to “refreeze”. In fact, the better a chloride deicer melts ice, the faster it dilutes out and freezes. Calcium chloride (CaCl₂) is a perfect example of this phenomenon. CaCl₂ “flash” melts snow and ice and then “flash” freezes.

Slowing down the rate at which the melted snow and ice refreeze is huge given the fact that most roadway surfaces are crowned. Significantly slowing down refreeze allows the melted snow and ice to run off the road surface before refreezing. Therefore, conditions that refreeze can cause snowfighters and traveling motorists are largely eliminated!

Cryoprotectants also inhibit the formation of ice crystals. Deicers and anti-icers containing sugar at meaningful levels are significantly more effective at preventing frost and ice formations!

6. The sugars in BH significantly strengthen and extend the anti-bonding characteristics of rock salt and NaCl brine. This is huge considering the costs of removing bonded precipitation verses removing un-bonded precipitation. Strengthening the anti-bonding performance of salt and brine becomes even more important as weather events intensify.
7. The sugars in BH make BH a tackifier. Pre-wetting rock salt with a heavy, sticky tackifier reduces bounce and scatter loss far more than pre-wetting agents containing little to no sugar. When it comes to anti-icing, the longer an anti-icer is held in the target area, the more ice it will melt in the target area. Anti-icers with little to no sugar quickly dilute out and are washed away, or they dry up and blow away. Regardless, anti-icers containing sugar are far, far more effective because they stay in the target area much longer.
8. The sugars in BH significantly strengthen and extend the residual effect of rock salt and NaCl brine. In fact, just the leftover residue from BH treated rock salt acts as an effective anti-icer at the next snow event! Just think, anti-icing without anti-icing! Yes, it works!
9. The dark sugars in BH reduce the very high albedo values of rock salt and brine. Albedo is the reflective value of an object. The lower the albedo value of rock salt and brine, the more solar radiation (heat) they can absorb and emit. The dark sugars in BH darken white rock salt and clear brine transforming them into heat (radiation) absorbers and emitters which significantly improve their ice melting capacity. Even on cloudy days up to 50% of the sun’s radiation still reaches the earth’s surface. Clear deicers like 32% CaCl₂, 23.3% NaCl brine and deicers containing corn syrup do not have this ability.

beet juice vs. BEET HEET®

DE-SUGARED 55% Solids Beet Juice

- Consistency - Very Inconsistent (Easily verified by laboratory testing)
- Total Sugar Content 8.6% to 20.2% (Which beet juice will you get?)
- Total Chloride Content <1.0%
- Total Active Ingredient Content <9.6% to 21.2% (41% to 73% less vs. BHC)
- Price Per each 1% of Active Ingredient = \$0.06 to \$0.12 (50% to 200% higher vs. BHC)
- Breathtaking Odor.
- Prone to Bacterial Growth (Sugar eating bacteria reduces sugar content)
- Plugging Issues (Tank sludge and plugging issues widely reported)
- Promoted as “non-chloride” deicer but can’t melt ice without adding chloride! Once activated with chloride, beet juice is a chloride deicer.
- At 5 gal. per ton, beet juice treated salt melts about 22.4% less ice than BHC at 25°F.

BEET HEET® Concentrate (BHC)

- Absolutely NO “beet juice” added
- Contains processed beet molasses. (No sludge or plugging issues)
- Consistency - Very Consistent (molasses is not a waste-stream product)
- Total Sugar Content >15.0% (up to 74% more vs. beet juice)
- Total Chloride Content >21.5% (Over 20 times more vs. beet juice)
- Total Active Ingredient Content >36.5% (72% to 280% more vs. beet juice)
- Price Per 1% of Active Ingredient = \$0.04 (33% to 68% lower vs. beet juice)
- Odor – Coffee, Syrup or Chocolate (sweet compared to beet juice)
- Bacteria can’t survive in BHC (no loss of sugar either)
- No Plugging or Tank Slugging Issues (none reported)
- Stand Alone Ice Melter (no time and effort of mixing with chloride required)
- At 5 gal. per ton, BHC treated salt melts about 28.8% more ice than beet juice at 25°F.

Conclusion

Beet juice costs 50% to 200% more than BHC when considering price per each 1% of active ingredient! Because beet juice contains 41% to 73% less active ingredient than BHC, beet juice treated salt melts about 22.4% less ice than BHC treated salt at 25°F. Therefore, beet juice users must use about 28.8% more salt to melt the same amount of ice as BHC treated salt. This means that **beet juice users are discharging much more chloride into their local environment than necessary.**

They are also spending much more on rock salt than necessary. Transitioning to BHC would allow current beet juice users to reduce their salt application rates by about 22.4% and still melt the same amount of ice as beet juice treated salt. **Transitioning to BHC would also decrease current beet juice user’s chloride emissions and rock salt costs by about 22.4%.**

BEET x HEET[®]

32% CaCl₂ vs. BEET HEET[®]

32% CaCl₂ (Calcium Chloride)

- Total Sugar Content 0.0%
- Total Chloride Content 32.0%
- Total Active Ingredient Content 32% (12.3% less vs. BHC)
- PNS Corrosion Value = 121 (717.5% more corrosive than BHC)
- At 7 gal/ton, 32% CaCl₂ treated salt melts about 27.5% less ice than BHC at 25°F.
- 32% CaCl₂ cannot reduce the albedo value of rock salt or brine! Albedo is the reflective value of an object. The lower the albedo value of rock salt and brine, the more solar radiation (heat) they can absorb and emit.

BEET HEET[®] Concentrate (BHC)

- Total Sugar Content >15.0%
- Total Chloride Content >21.5%
- Total Active Ingredient Content >36.5% (14.0% more vs. 32% CaCl₂)
- PNS Corrosion Value = 14.8 (87.7% less corrosive than 32% CaCl₂)
- At 5 gal. per ton, BHC treated salt melts about 38.1% more ice than 32% CaCl₂ treated salt at 25°F.
- BHC reduces the high albedo values of rock salt and brine by as much as 50%! BHC transforms white rock salt and clear brine into radiation absorbers and heat emitters. This transformation is far more important than most snowfighters realize.

Conclusion

Because 32% CaCl₂ contains 12.3% less active ingredient than BHC and does not contain any sugar, 32% CaCl₂ treated salt melts about 27.5% less ice than BHC treated salt at 25°F. Therefore, 32% CaCl₂ users must use about 38.1% more salt to melt the same amount of ice as BHC treated salt. This means that 32% CaCl₂ users are discharging about 38.1% more chloride into their local environment than necessary. They're also spending about 38.1% more on rock salt than necessary.

Transitioning to BHC would allow current 32% CaCl₂ users to reduce their salt application rates by about 27.5% and still melt the same amount of ice as 32% CaCl₂ treated salt. They would also be reducing their chloride emissions and rock salt costs by about 27.5%.

Because 32% CaCl₂ does not contain dark sugar like BHC, (See page 4 of this booklet) it has no ability to transform rock salt or brine into radiation absorbers and heat emitters. This, along with a 27.5% lower ice melt capacity makes it impossible for 32% CaCl₂ to outperform BHC in the laboratory or in the field. Couple these performance shortcomings with the fact that 32% CaCl₂ is over 700% more corrosive than BHC, it's very difficult to justify the use of 32% CaCl₂ over BHC.

TECHNICAL DATA SHEET

DESCRIPTION

BEET HEET® Concentrate is an organic based, corrosion inhibited, liquid deicer containing a highly refined carbohydrate concentrate, two exothermic chlorides and two non-exothermic chlorides. BEET HEET® Concentrate is a ready-to-use salt pre-wetting agent, and can also be blended with low cost 23.3% NaCl brine to create a lower cost, high performance, salt pre-wetting agent or direct application deicer/anti-icer.

ENVIRONMENT

BEET HEET® Concentrate and BEET HEET® Severe have passed the rigorous testing standards of the Pacific Northwest Snowfighters and are listed on the **PNS Qualified Products List**. BEET HEET® Concentrate is **99% biodegradable**, and achieves the “**readily biodegradable**” criteria by day 8. The USEPA has screened the ingredients in BEET HEET® Concentrate and BEET HEET® Severe and has authorized both products to carry the **USEPA Designed for the Environment label**. No other salt pre-wetting agent in North America can **reduce chloride emissions** as much as BEET HEET® Concentrate and BEET HEET® Severe.

PERFORMANCE

BEET HEET® Concentrate and BEET HEET® Severe have greater ice melting capacities than 32% CaCl₂, 28% MgCl₂, and “beet juice” deicers, at all temperature ranges. BEET HEET® Concentrate and BEET HEET® Severe provide far superior anti-bonding and residual effects than 32% CaCl₂, 28% MgCl₂, and 23.3% NaCl deicers.

COMPOSITION

Highly refined carbohydrate, CaCl₂, MgCl₂, KCl and NaCl. >43% solids. <32% chloride content. >15.0% total carbohydrate content. CORROSION DATA

How does BEET HEET® Concentrate (BHC) compare to other popular deicers when it comes to corrosion rates?

- 32% calcium chloride is more than 700% more corrosive than BHC.
- 23.3% sodium chloride brine is over 500% more corrosive than BHC.
- A typical “super-mix” deicer containing 10% 32% CaCl₂, 15% beet juice and 75% 23.3% NaCl, is **more than 400% more corrosive** than BHC.
- Deicers containing beet juice and 23.3% NaCl brine are significantly more corrosive than BHC and they don't even contain performance enhancing exothermic chlorides.

K-Tech uses an all natural sugars to reduce BHC's corrosion rate. Many, if not all, deicers claiming similar corrosion rates contain added chemicals to reduce corrosion values because they do not contain enough sugar to reduce corrosion values much. BHC contains no added corrosion inhibiting chemicals.

BEET x HEET®

Untreated rock salt is nearly 50% more costly to use than BEET HEET® treated salt!

Untreated rock salt is far and away the most expensive salt any agency could possibly use! When the cost of using untreated rock salt is compared to the cost of using BEET HEET® Concentrate treated salt, untreated rock salt is nearly 50% more expensive to use than BEET HEET® Concentrate treated salt! Similarly, 23.3% NaCl brine treated salt is also nearly 50% more costly to use than using BEET HEET® Concentrate treated salt! (see page 11)

This is the primary reason advanced agencies treat 100% of their rock salt with BEET HEET®, no matter what the temperature is. Using untreated rock salt over BEET HEET treated salt will cost your agency more money even at 25°F and above.

This is exactly why we say: “The initial cost of a salt pre-wetting agent has little to do with saving money! Saving money has everything to do with the performance of your salt!” The sooner you focus on the performance of your salt, rather than the price of your pre-wetting agent, the sooner you’ll experience significant savings!
